SUMMARY

Aspiring AI Engineer with hands-on experience in building software applications and AI/ML solutions using Python and Java. Proficient in developing end-to-end projects involving REST APIs, NLP, and machine learning, with a solid understanding of Agile development and tools like FastAPI, Spring Boot, and Docker. Currently pursuing an MCA degree, expecting to graduate in 2027, and focused on delivering practical and reliable application modules.

PROJECTS

PathFinder AI - Resume Analysis & Skill-Gap Mapping

Live Link : https://ashh-2004.github.io/Pathfinder-AI/ *May 2026*

- Built a **Python NLP pipeline** using **spaCy** to convert unstructured resume text into structured **skills** and competencies.
- Implemented **automated skill-gap scoring** and personalized **learning recommendations**.
- Developed **FastAPI** and **React** application layers for end-to-end processing.

EmployeeMate - RAG & Agentic Employee Assistant

https://github.com/Ashh-2004/EmployeeMate *September 2026*

- Developed a full-stack AI assistant utilizing **FastAPI, React, LangChain, ChromaDB, and LLMs**.
- Implemented **RAG, agent-based routing, conversation memory, CrossEncoder reranking, JWT/RBAC, prompt-injection protection, and Docker-based deployment** for secure, context-aware HR assistance.

LoanSense AI - Credit Risk & Scoring Platform

https://github.com/Ashh-2004/loansense-AI *May 2026*

- Developed and validated an **XGBoost credit-risk classifier**, benchmarking it against **Logistic Regression**.
- Enhanced **recall** from 48.03% to 51.56% and **F1 score** from 55.11% to 57.12%.
- Decreased **false negatives** from 382 to 356 and increased **correctly detected defaults** from 353 to 379.
- Implemented **SHAP** for model interpretation and created a **natural-language-to-SQL workflow** for MySQL.

SecurePay - Banking Fraud Detection Engine

https://github.com/Ashh-2004/securepay-fraud-detection *June 2026*

- Developed a **real-time fraud-detection application** using Java and Spring Boot, processing transactions in less than 1 ms.
- Created 5 **configurable fraud rules** with 3 outcomes: Approved, Suspicious, and Fraud.
- Integrated Ollama/GLM-4 to **generate explanations** for flagged transaction anomalies.
- Containerized the application using **Docker** for seamless deployment.

EDUCATION

Master of Computer Applications (MCA) *Expected 2027*
Bangalore Institute of Technology (BIT), Bengaluru

Bachelor of Computer Applications (BCA) *2022 – 2025*
St. Joseph's University, Bengaluru

SKILLS

Programming: Python, Java, SQL, R

Software Engineering: Agile Development, FastAPI, Spring Boot, REST APIs, MySQL, Docker, Git/GitHub

AI / Machine Learning: Scikit-learn, XGBoost, Pandas, NumPy, EDA, Feature Engineering, Classification, Predictive Modeling, Model Validation, SHAP

NLP / GenAI: NLP, spaCy, GPT-2, LLM Integration, Prompt Engineering, Fine-Tuning, Ollama, GLM-4
